SAS Water: Working with you to keep your staff and customers safe

INTRODUCTION

SAS Water is an industry leader in all aspects of Legionella control. We work with your business, providing bespoke advice designed to keep your staff, customers and visitors safe from the risk of Legionella Disease.

Each year, there are around 250 reported cases of Legionnaires' Disease in the UK. It is usually caught by breathing in small droplets of contaminated water and is potentially deadly in around 10 per cent of cases.

SAS Water can support your safety management, whether you need a comprehensive long-term solution or are facing a potential crisis.

Your business has a duty under the law both to understand and monitor risk and this can be daunting. Our experienced and knowledgeable team is able to provide a risk management service, training, crisis and emergency management.

WHO WE ARE

SAS Water was founded in Derbyshire by Keith Froggatt in 1988 and is now owned and managed by Lizzie Froggatt, Keith's daughter from offices in Leek, Staffordshire.

Lizzie has grown the company and has developed an expert team who are available to offer advice, training and long-term consultancy services, alongside a highly responsive 24-hours-a-day, seven days a week emergency call-out service. Our central location, in between the Manchester and Birmingham conurbations, gives us easy access across the UK.

We recognise that your wet facilities are vital to the success of your business and that high standards of maintenance and the safe operation of your water systems customers is a major priority.

SAS Water is the trading name of Ackw Ltd.
